

KX25 and Audiogram3 Desktop Computer Recording System MAP \$299

Yamaha has put together an amazing package for people who want to start recording right away on their computer. It combines the AUDIOGRAM3 USB interface, a KX MIDI controller, Cubase AI 48-track software and a DVD full of over 4GB of VST instruments from the top soft synth companies in the industry. This complete package has everything you need to record right now for under \$300!

The AUDIOGRAM3 turns your computer into a powerful yet intuitive tool for recording and editing audio from virtually any microphone, instrument or audio device. It's the only USB audio interface in its price range to have Phantom Power (so you can use studio quality microphones) and 3 inputs (so you can connect a microphone and a stereo keyboard and record them both simultaneously to a stereo track).

Setup is as easy as installing the bundled CUBASE AI 48-track stereo audio/MIDI music-production software on your computer and connecting the audio interface using the USB cable provided! You're then ready to connect instruments, microphones, CD players, and MP3 players for recording and mixing inside CUBASE AI.

The KX series isn't just a great feeling Yamaha MIDI keyboard controller with tons of hands-on controls for your DAW. Including an expanded HALion One VST instrument, and built-in arpeggios, the KX is a complete MIDI music production studio with advanced Cubase AI integration features.

Yamaha also includes the XFactor DVD in this package with over 4GB of VST instruments including the Yamaha S90ES piano and Sonic Reality Silver Soundz in HALion One format, Sample Tank YE, BFD YE and many others. So you have tons of soft synth sounds to play and record with your KX MIDI controller.

The KX25 and AUDIOGRAM3 are a perfect combination to give you all the tools you need to start recording on your computer right now. This whole system fits easily on a desktop so it's perfect for school installations and is completely portable for recording on the go.
