## Link PJP-50Rs for smooth Web conferencing

When you combine the PJP-CAM1 with the PJP-50R, the camera can automatically shoot in the direction of the talker based on the information on the talker's position detected by the PJP-50R. When participating in a Web conference with several people it can be difficult to know who is talking. But because the PJP-CAM1 automatically tracks and shoots the talker, other participants can instantly recognize who is speaking. Also, by using the PJP-50R microphone speaker, the sound clarity makes conferences even smoother.
