- (1) Changes in the state of material subsidiaries during the period (Changes regarding significant subsidiaries accompanying changes in the scope of consolidation): None  
Newly included: — Excluded: —
- (2) Changes in accounting policies and changes in accounting estimates  
(a) Changes in accounting policies required by IFRS: None  
(b) Changes other than those in (a) above: None  
(c) Changes in accounting estimates: None
- (3) Number of shares outstanding (common shares)

(a) Number of shares outstanding at the end of the period (including treasury shares)	<b>Second quarter of FY2020.3</b>	<b>191,555,025 shares</b>	FY2019.3	191,555,025 shares
(b) Number of treasury shares at the end of the period	<b>Second quarter of FY2020.3</b>	<b>13,198,907 shares</b>	FY2019.3	11,919,368 shares
(c) Average number of shares outstanding during the period (cumulative period)	<b>Second quarter of FY2020.3</b>	<b>178,535,635 shares</b>	Second quarter of FY2019.3	181,847,233 shares

\*This quarterly flash report is exempt from the quarterly review procedures by certified public accountants or audit firm.

### \*Explanation of the Appropriate Use of Performance Forecasts and Other Related Items

Consolidated financial forecasts were prepared based on information available at the time of the announcement and do not represent promises by the Company or its management that these performance figures will be attained. Actual consolidated results may differ from forecasts owing to a wide range of factors.

For commentary information regarding the closing of accounts through the second quarter of FY2020.3, please refer to “Yamaha Reports Second Quarter (Six Months) Results of Fiscal Year Ending March 2020 and Full Year Outlook [IFRS]”, which was released today (November 1, 2019).

### Revision in Performance Forecast

The forecast for the full fiscal year calls for a downward revision of revenue to ¥435.0 billion, core operating profit to ¥53.0 billion, operating profit to ¥54.5 billion, profit before income tax to ¥57.0 billion, and profit for the period attributable to owners of the parent to ¥41.5 billion.

As indicated in “1. Condensed Quarterly Consolidated Financial Statements and Major Notes,” “(5) Notes to the Condensed Quarterly Consolidated Financial Statements, Important Subsequent Events” on page 19, the Company made a decision related to the acquisition of treasury shares at the meeting of the Board of Directors held on November 1, 2019. The effect of this decision on acquisition of treasury shares has not been taken into account in calculating “Basic profit per share” in the consolidated financial forecasts for FY2020.3.

The materials distributed at the earnings presentation and other materials will be posted on the Company’s website immediately after the presentation is concluded.

### (Application of IFRS)

The Company has applied the International Financial Reporting Standards (IFRS) from the first quarter of fiscal year ending March 31, 2020 (FY2020.3). Financial figures through the previous second quarter and the previous fiscal year are also presented in accordance with IFRS.

## **(5) Notes to the Condensed Quarterly Consolidated Financial Statements**

### **Notes Regarding Assumptions as a Going Concern**

Not applicable

### **Notes Regarding Significant Changes in the Amount of Equity Attributable to Owners of the Parent**

Not applicable

### **Reporting Entity**

Yamaha Corporation (hereinafter the “Company”) is a company located in Japan and listed on the Tokyo Stock Exchange. The registered address of the Company’s headquarters is 10-1, Nakazawa-cho, Naka-ku, Hamamatsu, Shizuoka, Japan. The condensed quarterly consolidated financial statements of the Company and its subsidiaries (the “Group”) with a fiscal year ended September 30, 2019, comprise the Group’s financial statements as well as equity interest in associates of the Group. The Group’s operations are the musical instruments business, audio equipment business, and other businesses.

### **Basis for Preparation**

#### **(1) Statement of compliance with IFRS and items related to the first-time adoption**

The Group prepares the condensed quarterly consolidated financial statements in accordance with International Accounting Standards (IAS) 34. Having met the requirements for a Specified Company under the Designated International Accounting Standards (IAS), as prescribed in Article 1-2 of the Regulation on the Terminology, Forms, and Preparation Methods of Consolidated Financial Statements, the condensed quarterly consolidated financial statements of the Group applies provisions of Article 93 of the aforementioned regulation.

The Group applied IFRS for the first time from the first quarter of FY2020.3 and the date of transition to IFRS was April 1, 2018. The Group previously applied Japanese generally accepted accounting principles (Japanese GAAP), and the most recent consolidated financial statements the Group prepared according to Japanese GAAP were for the fiscal year ended March 31, 2019. Upon the transition to IFRS, “First-time Adoption of International Financial Reporting Standards” (IFRS 1) is applied and statements of the impact of the adoption on the Group’s financial position and operating performance are stated in the “First-time adoption”.

#### **(2) Basis of measurement**

The condensed quarterly consolidated financial statements of the Group have been prepared based on the accounting policies presented in “Significant Accounting Policies.” The balance of assets and liabilities, with the exception stated in significant accounting policies for financial instruments measured at fair value and assets and liabilities associated with the defined benefit plans, are reported based on acquisition costs.

#### **(3) Functional currency and presentation currency**

The condensed quarterly consolidated financial statements of the Group are presented in Japanese yen, which is the functional currency of the Company, in units of one million yen with figures less than one million yen rounded down.

### **Significant Accounting Policies**

#### **(1) Basis of consolidation**

The condensed quarterly consolidated financial statements of the Group are prepared by applying unified accounting policies based on the financial statements of the Group and associated companies. In the instance where a subsidiary or associated company’s accounting policy differs from the Group’s policies, the financial statements of the company have been adjusted as necessary.

##### **A) Subsidiaries**

A subsidiary is an entity controlled by the Group. The Group controls an entity when it has power over the invested company, when its involvement in the invested company affects returns, and when it has the ability to use its power over the invested company to affect returns.

The financial statements of subsidiaries are included in the condensed quarterly consolidated financial statements of the Group from the date on which control commences until the date on which control ceases. In the instance that the Group retains control over a subsidiary after divesting a portion of the Group’s interest in the company, the

change in the Group's equity interest in the company is accounted as a capital transaction and the difference between the adjusted amount and the fair value of the noncontrolling interest is directly recognized as equity attributable to owner of parent company. In the instance of loss of control, the profit or loss arisen from the divestment are recognized.

The balance of receivables and payables and transactions among Group companies, and unrealized profit and loss from transactions between Group companies are eliminated upon preparation of the condensed quarterly consolidated financial statements.

Comprehensive income of subsidiaries shall be attributed to the owners of the parent company and noncontrolling interest even if the balance of noncontrolling interest is negative.

In the instance that a subsidiary has an accounting period for its financial statement that is different from the Company's accounting period, the amounts shall be adjusted, such as by preparing additional financial statement in accordance with the Company's accounting period.

**B) Associated companies**

An associated company is an entity that is not controlled by the Group but for which the Group is able to exert significant influence over the financial and operating policies. The equity method is applied to investments in associated companies based on the acquisition cost at the time of acquisition. The Group's portion of the profit and loss, and other comprehensive income from the date on which the significant influence commences until the date on which the significant influence ceases are recognized as changes in the investment amount in the associated companies.

**C) Business combination**

Business combinations are accounted for using the acquisition method.

The acquisition cost is measured as the sum of the acquisition-date fair value of the assets transferred, liabilities underwritten and the equity instruments issued by the Company in exchange for control of the acquiree. Transaction costs incurred in association with a business combination are processed as expenses at the time they occur.

Excess of the acquisition cost over the Group's share of the net fair value of the identifiable assets and liabilities underwritten on the date of acquisition is recognized as goodwill. Conversely, the difference of an amount less than the acquisition cost is recognized in profit or loss.

The Group applies the exemption prescribed in IFRS 1 allowing it to elect not to retrospectively apply IFRS 3 "Business Combinations" for business combinations that occurred before the date of transition to IFRS.

**(2) Foreign currencies**

**A) Transaction denominated in foreign currencies**

The financial statements of each of the Group entities are prepared using each company's functional currency.

Transactions conducted in currencies other than the functional currency are translated into the functional currency using the exchange rate on the transaction date or an exchange rate that approximates the exchange rate on that date. Foreign currency monetary items on the end of a reporting period are reconverted at the exchange rate on that date, and foreign currency non-monetary items measured at fair value are reconverted at exchange rate on the date of calculation of fair value; and both are converted to the functional currency. Any exchange difference arising from reconversion or settlement are recognized in profit or loss.

However, exchange differences arising from financial instruments measured through other comprehensive income or cash flow hedges are recognized in other comprehensive income.

**B) Foreign operations**

Assets and liabilities of the Group's foreign operations are translated using the exchange rates on the final date of a reporting period. Income and expense items are translated at the average exchange rates for the reporting period, unless any significant change has occurred. Any exchange differences arising from these translations are recognized in other comprehensive income. If a foreign operation is disposed of, the accumulated amount of the translation

difference related to the foreign operation is transferred to profit or loss at the time the foreign operation was disposed of.

The Group has applied the IFRS 1 exemption provision allowing it to transfer cumulative translation differences of foreign operations at the date of transition to IFRS from other components of equity to retained earnings.

### **(3) Financial instruments**

#### **A) Financial assets**

##### **(a) Initial recognition and measurement**

Initial recognition of financial assets is on the date of the Group's transaction with the contract party.

Financial assets at initial recognition, other than financial assets measured at fair value through profit or loss, are measured at an amount of fair value plus transaction costs directly attributable to the acquisition of the financial asset. Transaction costs of financial assets measured at fair value through profit or loss are recognized in profit or loss.

##### **(b) Classification and subsequent measurement**

The Group, at initial recognition, classifies financial assets as (i) financial assets measured at amortized cost, (ii) financial assets measured at fair value through other comprehensive income, or (iii) financial assets measured at fair value through profit or loss.

###### **(i) Financial assets measured at amortized cost**

Among financial assets, debt instruments meeting the following criteria together are categorized as financial assets measured at amortized cost.

- They are held based on a business model whose objective is to hold financial assets in order to collect contractual cash flows
- The contractual terms of these instruments give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

After initial recognition, financial assets measured at amortized cost are measured at amortized cost using the effective interest rate method. The amortized amount using the effective interest rate method and profit and loss, in cases where a financial asset is derecognized, are recognized at profit or loss.

###### **(ii) Financial assets measured at fair value through other comprehensive income**

Among financial assets, debt instruments meeting the following criteria together are categorized as financial assets measured at fair value through other comprehensive income.

- They are held based on a business model whose objective is achieved by both collecting contractual cash flows and selling assets.
- The contractual terms of these instruments give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

Equity instruments, such as shares of Yamaha Motor Co., Ltd. which are using a common brand with the Group and shares of companies related to other businesses, are categorized upon initial recognition as financial assets measured at fair value through other comprehensive income.

The amount of change in the fair value of equity instruments measured at fair value through other comprehensive income after initial recognition is recognized as other comprehensive income. In the instance financial assets are derecognized or the fair value decreases materially, the accumulated other comprehensive income is transferred to retained earnings. Dividends from such financial assets are recognized in profit or loss as finance income.

###### **(iii) Financial assets measured at fair value through profit or loss**

Financial assets other than the above are categorized as financial assets measured at fair value through profit or loss.

The amount of change in the fair value of financial assets measured at fair value through profit or loss after initial recognition are recognized as profit or loss.

(c) Impairment of financial assets

For the trade and other receivables, the Group recognizes an allowance for doubtful accounts equivalent to the expected credit loss over the full period.

For trade and other receivables for which repayment is deemed as a serious or potentially serious problem, the impairment loss amount of such assets is assessed individually or in groups with assets of similar types of risk and accounted in the allowance for doubtful accounts.

For trade and other receivables that do not fall into the above category, impairment loss is assessed primarily based on the historical actual default rate and accounted in the allowance for doubtful accounts.

For trade and other receivables where the actual impairment loss was previously recognized and the impairment amount decreased due to a subsequent event, the previously recognized impairment amount is reversed and recognized in profit or loss.

For trade and other receivables that have clearly become unrecoverable, the unrecoverable amount is directly reduced.

(d) Derecognition

The Group derecognize a financial asset when the contractual rights to cash flows from the financial asset expire or when such rights are transferred by the Group and all the risks and economic value of ownership of the financial asset are substantially transferred.

B) Financial liabilities

(a) Initial recognition and measurement

The Group initially recognizes a financial liability on the trading date that the Group becomes the contracting party.

Financial liabilities measured at amortized cost at initial recognition are measured at fair value less the associated direct transaction costs.

(b) Categorization and subsequent measurement

Financial liabilities are classified at initial recognition as financial liabilities measured at amortized cost.

After initial recognition, financial liabilities measured at amortized cost are measured at amortized cost using the effective interest rate method. The amortized amount using the effective interest rate method and profit and loss, in cases where a financial liability is derecognized, are recognized at profit or loss.

(c) Derecognition

A financial liability is derecognized when it is extinguished, i.e., when the obligation specified in the contract is discharged, cancelled, or expires.

C) Presentation of financial instruments

Financial assets and liabilities are offset and presented at their net amount in the consolidated statement of financial position when the Group has a legally enforceable right to offset the financial asset and liability balances and it intends either to settle on a net basis or to realize financial assets and settle financial liabilities simultaneously.

D) Hedge accounting and derivatives

The Group uses, within the scope of actual demand, forward exchange contracts (comprehensive contract) and currency options to reduce potential foreign exchange risk from foreign-currency denominated receivables and payables incurred during import and export transactions. Derivative transactions are initially recognized at fair value upon execution of a contract and subsequently remeasured at fair value.

With regard to derivative transactions, the Group financial management policies and rules and each company's management policies and rules based on those of the Group have been established and transactions and management are conducted in compliance with policies and rules.

Derivative transactions that fulfill the criteria for hedge accounting are applied to cash flow hedge with the effective portion of profit or loss arising from the hedge instrument recognized as other comprehensive income and the remaining ineffective portion recognized as profit or loss. The amount of a hedge instrument recorded as other comprehensive income is transferred to profit or loss at the time the transaction conducted as a hedged item affects profit or loss.

Transactions to apply hedge accounting are assessed on an ongoing basis whether the derivative used for the hedge transactions at the inception of the hedge and during the hedge period is effectively offsetting the change in cash flows of the hedged item.

**(4) Cash and cash equivalents**

Cash and cash equivalents comprise cash on hand, demand deposits as well as short-term investments that are readily convertible into cash, are not exposed to significant risk related to changes in value and are redeemable within three months of the date of acquisition.

**(5) Inventories**

Inventories are measured at the lower of acquisition cost and net realizable value.

The acquisition cost of inventories is determined principally based on the weighted average method and includes the purchase cost, processing cost, and any other costs incurred in bringing the inventories to their present location and condition. Net realizable value is the estimated selling price in the ordinary course of business less the estimated costs of completion and the estimated costs necessary to make the sale.

**(6) Property, plant and equipment**

Property, plant and equipment is measured using the cost model and stated at acquisition cost less accumulated depreciation and accumulated impairment losses.

The acquisition cost of property, plant and equipment comprises any costs directly attributable to the acquisition of the item, the initial estimate for disassembly, removal, or other restoration costs and borrowing costs that should be capitalized.

Depreciation costs on an item of property, plant and equipment, other than land and construction in progress, are recognized on a straight-line basis over its estimated useful life. The range of estimated useful lives by major asset item is as follows:

- Buildings: 31 to 50 years  
(Equipment attached to the buildings is mainly 15 years)
- Structures: 10 to 30 years
- Machinery and equipment: 4 to 12 years
- Tools, furniture and fixtures: 5 to 6 years

Estimated useful life, residual value, and depreciation methods are reviewed at the end of each consolidated fiscal year and, if there is a change, adjustments will be applied from that point forward as changes in accounting estimate.

**(7) Right-of-use assets**

The Group leases a portion of its property, plant, and equipment.

The acquisition cost of right-of-use assets is set at the initial measurement of the present value of the lease fee during a non-cancelable period at the lease start date plus reasonably sure extension option period (hereafter “lease period”), and any lease prepayments prior to the lease start date, initial direct costs and the amount of the initial estimate for disassembly, removal, or other restoration costs and less an lease incentives received. Lease liabilities are set at the initial measurement of the present value of the lease fee during the lease period. In the instance of changes in the lease period or lease fee subsequent to the initial measurement, lease liabilities amounts are remeasured, and the acquisition cost of a right-of-use asset and the lease liability amounts are adjusted.

Right-of-use assets are accounted using the cost model and stated at acquisition cost less accumulated depreciation and accumulated impairment loss amount. Lease liabilities are stated at the initial measurement amount and adjusted amount due to remeasurement less payments of lease fee and adjusted for interest.

Depreciation cost of right-of-use assets is accounted for using the straight-line method over the lease period. Interest expenses associated with lease liabilities are classified separately from depreciation costs on right-of-use assets and included in finance expenses.

However, items with short-term leases of lease periods of 12 months or less and underlying assets with low-value are not recognized as right-of-use assets or lease liabilities and lease fees are recognized as profit or loss either by applying the straight-line basis or other established standards to the lease amount.

The Group applies the exemption prescribed in IFRS 1 allowing a lease classified as an operating lease prior to the transition date to IFRS to report an equivalent amount to the lease liability on the date of the transition to IFRS.

## **(8) Goodwill and intangible assets**

### **A) Goodwill**

The measurement method at the initial recognition of goodwill is stated in “(1) Basis of consolidation, C) Business combination.” Goodwill is presented as the amount of the acquisition cost less accumulated impairment loss.

### **B) Intangible assets**

Intangible assets are accounted using the cost model and stated as the amount of the acquisition cost less accumulated amortization and accumulated impairment loss.

## **(9) Impairment of non-financial assets**

Non-financial assets (excluding inventories, deferred tax assets, and assets associated with employee benefits) are assessed at the final date of each reporting period for indications of impairment and tested for impairment when indications are found. Impairment tests are conducted every period and each time indications of impairment are found for goodwill, intangible assets for which a useful life cannot be determined, and intangible assets which are unusable on the final date of the reporting period.

Impairment loss is recognized if an impairment test finds the book value of the asset or a cash-generating unit exceeds the recoverable amount of an asset.

For assets not tested individually at impairment test, assets are grouped together into the smallest cash-generating unit that generate cash inflows that are largely independent of the cash inflows of other assets or asset group. The recoverable amount of an asset or a cash-generating unit is the higher of its value in use and its fair value less the cost of disposal. In determining the value in use, estimated future cash flows arising from assets and cash-generating unit are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset.

Recognition of impairment loss of cash-generating units including goodwill is conducted by first allocating to reduce the book value of the goodwill that was allocated to the cash-generating unit, then proportionately distributing the impairment based on the book value of each asset of the cash-generating unit.

If an impairment loss recognized in a previous period shows indications of a reversal and the recoverable amount of an asset or cash-generating unit exceeds the book value, the impairment loss is reversed. The impairment loss is reversed up to the lower of the calculated recoverable amount or book value less the necessary depreciation and amortization in the instance impairment loss was not recognized previously. Impairment loss associated with goodwill is not reversed.

## **(10) Provision**

The Group has present legal and constructive obligation arising from past circumstances and this is likely to require the Group to forego resources with economic benefits to settle debts. If a reliable estimate for such debt can be determined, it is recognized as a provision.

In instances where the time value of money becomes material, the provision amount is measured based on estimated future cash flows discounted to their present value using a discount rate reflecting the time value of money and risk specific to the liability.

## **(11) Employee benefits**

### **A) Post-employment benefit**

The Group maintains defined-benefit pension plans and defined-contribution pension plans as post-employment benefit plans for employees.

Defined benefit obligation is determined using the projected unit credit method based on the present value of the defined benefit obligation and related current and past service costs. The discount rate used to discount to the present value of defined benefit obligations is determined by referring to the market yields of high-quality corporate bonds matching the currency and the maturity date with the retirement benefit obligation. Assets or liabilities related to the defined benefit plans are calculated as the net sum of the present value of the defined benefit obligation and the fair value of plan assets for each plan. Differences arising in remeasurement of defined benefit plans are recognized in a lump sum in other comprehensive income in the period they are incurred and immediately transferred to retained earnings. Past service costs are recognized as profit or loss in the period they occur.

Contributions to defined contribution pension plans are recognized as expenses at the time the relevant service are provided.

### **B) Short-term employee benefits**

Short-term employee benefits are not discounted and are recognized as an expense at the time service is provided.

Bonuses and paid leave costs are recognized as a liability in the amount expected to be paid if the Group has a present legal or constructive obligation to pay this amount as a result of past service provided by the employee and the obligation can be estimated reliably.

## **(12) Government grants**

Government grants are recognized at their fair value when the conditions attached to the grants are fulfilled and there is reasonable assurance that the subsidy will be received.

A grant related to an asset is treated as deferred revenue and regularly recorded as revenue during the period the associated asset incurs expenses. A grant related revenue is regularly recognized as profit or loss in the period in which such costs corresponding to grants are incurred.

## **(13) Equity**

The issue value of common shares is recorded as capital stock and capital surplus, and costs associated with the issue of common shares is deducted from the capital surplus.

Treasury stock is recognized at the acquisition cost and treated as a deduction from equity. In the event that treasury stock is sold, the difference between the book value at the time of sales and the actual amount received is recognized as capital surplus.

## **(14) Share-based compensation**

The Group has introduced equity-settled and cash-settled share-based compensation plans for executive officers (excluding executive officer in charge of the internal auditing) and certain corporate officers to further promote sustainable increases in corporate value and shared value with shareholders.

Equity-settled share-based compensation is a restricted stock compensation system. Among the granted Company's shares, the value of a certain number of shares that the lifting of the transfer restrictions are expected is measured by the fair value of the stocks referred at the time they are granted and are recognized under profit or loss as an expense for the corresponding service and an equivalent amount is recognized as an addition to equity.

Cash-settled share-based compensation is formulated with the same conditions as the equity-settled stock-based compensation and estimated future payment amount at the end of each reporting period is measured as fair value and recognized under profit or loss as an expense for the corresponding service.

## **(15) Revenue Recognition**

Revenue is recognized through the following steps in accordance with IFRS 15.

Step 1. Identify the contract(s) with a customer

Step 2. Identify the performance obligations in the contract.

Step 3. Determine the transaction price.

Step 4. Allocate the transaction price to each performance.

Step 5. Recognize revenue when/as a performance obligation is satisfied.

The Group's main business is the manufacture and sale of musical instruments, audio equipment, and other products. In principle, the customer takes possession of an item at the time of transfer and this is deemed as fulfilling the performance obligation. In most circumstances, revenue from an item is recognized at the time of transfer.

Revenue is measured as the amount set at the time of contract with customers less any amount provided as a discount, rebate, or for a sales return.

## **(16) Income tax**

Income taxes comprise current and deferred tax and are recognized as profit or loss with the exception of items related to business combinations or recognized directly in equity or in other comprehensive income.

Current tax is measured at the amount expected to be paid to or recovered from the tax authorities. The amount of current tax is determined based on the tax rates and tax laws that have been enacted or substantively enacted by the end of the reporting period. In the event of uncertainty concerning the tax position for treatment under income tax, if there is a high probability of the tax position to occur based on the tax laws, then a reasonable estimated amount is recognized as an asset or liability.

Deferred tax is recognized on temporary difference between the reported book value of assets and liabilities at the end of reporting period and associated amounts for taxation purpose, losses carried forward and tax credit carried forward.

A deferred tax asset is recognized for future deductible temporary differences, losses carried forward, and tax credit carried forward to the extent that taxable income is highly probable to occur for them to recover. A deferred tax liability is, in principle, recognized for all projected future taxable temporary differences. A deferred tax asset is reviewed each fiscal period and reduced to the extent that the tax benefit of the deferred tax assets is no longer expected to be realized.

Deferred tax assets and liabilities are not recognized for the following temporary differences:

- Future taxable temporary differences arising from the initial recognition of goodwill;
- Temporary differences arising on the initial recognition of an asset or liability arising in a transaction other than a business combination and that affects neither accounting profit nor taxable income;
- Future taxable temporary differences associated with investments in subsidiaries and associates to the extent that the timing of the reversal of the temporary differences can be controlled and it is probable that they will not reverse in the foreseeable future;
- Future deductible temporary differences associated with investments in subsidiaries and associates to the extent it is not probable that sufficient taxable income will be available to use the benefits from the taxable temporary difference or that it is not probable that the taxable temporary difference will be eliminated in the foreseeable future.

Deferred tax assets and liabilities are measured at the tax rates that are expected to be applied in the period when the asset is realized or liability is settled, based on statutory tax rates and tax laws that have been enacted or substantively enacted at the end of the reporting period.

Deferred tax assets and liabilities are netted when the entity has a legally enforceable right to offset current tax assets and liabilities, and the tax balances are associated to the same entity and same taxation authority.

The Company and some of its subsidiaries have adopted the consolidated taxation system.

## **(17) Profit per share**

Basic profit per share is calculated by the profit or loss attributable to the parent company's common shareholders for the period divided by the weighted-average number of common shares issued that have adjusted for treasury shares during the period. Diluted profit per share is not calculated because there are no latent shares with the dilution effect.

## **Significant Accounting Estimates and Judgments**

The Group utilizes estimates and assumptions concerning the application of accounting policies and measurement of assets, liabilities, revenues and expenditures in the preparation of the condensed quarterly consolidated financial statements. The estimates and assumptions are based on the management best judgement in consideration of past performance and other various factors considered to be reasonable at the end of reporting period. However, by their nature, the presented amounts that are based on estimates and assumptions may differ from actual results.

The estimates and the underlying assumptions are reviewed on an ongoing basis, and the effects of revisions to the estimates are recognized in the period in which the estimate is revised and in future periods that are affected by the revision. Judgments, estimates, and assumptions that have significant effects on the amount recognized in the condensed quarterly consolidated financial statements of the Group are as follows.

- **Scope of subsidiaries (Note: "Significant Accounting Policies (1) Basis of consolidation")**  
Whether a subsidiary is eligible for inclusion in the consolidation is determined by whether the Group has control over the company.
- **Impairment of non-financial assets (Note: "Significant Accounting Policies (9) Impairment of non-financial assets")**  
The Group conducts impairment tests in accordance with the note "Significant Accounting Policies" on property, plant and equipment, goodwill, and intangible assets. The impairment tests to calculate recoverable value include assumptions for future cash flow, discount rates, and other items. Management uses their best estimates and judgment to set the assumptions; however, the test results can be affected by changes in uncertain future economic conditions. When revisions are necessary, the changes can have a material effect on the condensed quarterly consolidated financial statements.
- **Recognition and measurement of allowance (Note: "Significant Accounting Policies (10) Provision")**  
Allowances are measured based on best estimates of payments to settle future debts on the last day of the reporting period. The payment amounts expected to be used to settle debts in the future are calculated in consideration of all possible outcomes in the future. The estimates used to calculate such allowances can be affected by changes in uncertain future economic conditions and therefore contain the risk that the measured amounts for the allowances may require significant revision in the future.
- **Measurement of retirement benefit obligation (Note: "Significant Accounting Policies (11) Employee benefits")**  
The defined benefit corporate pension plan recognizes the net amount of the defined benefit obligation and fair value of plan assets as assets and liabilities. The defined benefit obligation is calculated using actuarial calculation, which includes estimates for the discount rate, retirement rate, mortality rate, and rate of salary increase. These assumptions are determined based on a comprehensive judgment using available information, such as market trends in interest rate fluctuations. The assumptions for the actuarial calculation can be affected by the uncertain future economic environment and social changes and therefore contain the risk that the measured amounts for the retirement benefit obligation may require significant revision in the future.
- **Recoverability of deferred tax assets (Note: "Significant Accounting Policies (16) Income tax")**  
Deferred tax assets are recognized based on the assumption that the company has a high probability of generating taxable income that can be applied to future deductible temporary differences. The judgment of the possibility of generating taxable income is based on projections of when and how much income is expected in the business plan. Management uses their best estimates to set the estimates; however, uncertain future economic conditions can change to the extent that they affect the actual results.

## **Segment Information**

### **(1) Summary of reportable segments**

Reportable segments are composed of business units that separate financial information can be obtained and are regularly reviewed by the Board of Directors of the Company for the purpose of business performance evaluation and management resource allocation decisions.

The Group's reportable segments, based on its economic features and similarity of products and services, comprise its two principal reportable segments, which are the "musical instruments" and "audio equipment." Other businesses are included in the "others" segment. The musical instruments segment includes the manufacture and sales of pianos; digital musical instruments; wind, string, and percussion instruments; and other music-related activities. The audio equipment segment includes the manufacture and sales of audio products, professional audio equipment, information and telecommunication equipment, and certain other products. The "others" segment includes electronic devices business, automobile interior wood components, factory automation (FA) equipment, golf products, resort, and certain other lines of business.

## (2) Reportable segment information

The Group's reportable segment information is as follows.

The accounting methods of the reported business segments are the same as those presented in "Significant Accounting Policies".

Second quarter of FY2019.3 (April 1, 2018 – September 30, 2018)

(Millions of yen)

	Reportable segment			Others	Total	Adjustments	Consolidated
	Musical instruments	Audio equipment	Total

## Revenue

Revenue comprises the following.

### (1) Breakdown of revenue

The Group's reportable segments, based on its economic features and similarity of products and services, comprise its two principal reportable segments, which are the "musical instruments" and "audio equipment." Other businesses are included in the "others" segment. Revenue is also presented the region broken down by customer location. The following is information about the breakdown of revenue and segment revenue.

See "Segment Information" for product and other information about each segment.

Second quarter of FY2019.3 (April 1, 2018 – September 30, 2018)

### Important Subsequent Events

The Company decided at the meeting of the Board of Directors held on November 1, 2019, the following items related to the acquisition of treasury shares based on the application of the provisions of Article 156 of Japan's Companies Act pursuant to the rewording of Article 165-3.

#### (1) Reasons for the Acquisition of Treasury Shares

The reasons for the acquisition of treasury shares are to provide a return to shareholders and to increase capital efficiency.

#### (2) Content of Items Related to Acquisition

- |   |  |
|---|--|
| A) Type of shares to be acquired:         | Common shares of the Company   |
| B) Total number of shares to be acquired: | 4,000,000 shares (maximum)<br>(Representing 2.2% of outstanding shares, excluding treasury shares) |
| C) Total amount of acquisition:           | ¥15.0 billion (maximum)  |
| D) Acquisition period:                    | November 5, 2019 to March 31, 2020   |
| E) Acquisition method:                    | Purchase on the Tokyo Stock Exchange market  |

## **First-time Adoption**

The Group is presenting its condensed quarterly consolidated financial statements in accordance with IFRS from the first quarter of FY2020.3. The Group previously applied Japanese GAAP, and the most recent consolidated financial statements the Group prepared according to Japanese GAAP were for the fiscal year ended March 31, 2019. The date of transition to IFRS was April 1, 2018.

### **(1) IFRS 1 exemptions**

Companies adopting IFRS for the first time are, in principle, required retroactively apply IFRS to previous-year statements. However, IFRS 1 “First-time Adoption of International Financial Reporting Standards” (IFRS 1) allows certain exemptions in the preparation of statements retroactively applying IFRS.

The Group has applied the following exemptions in the transition from Japanese GAAP to IFRS.

#### **A) Business combination**

The Group has not retroactively applied IFRS 3 “Business Combinations” for business combinations that occurred before the date of transition to IFRS.

#### **B) Exchange differences on translation of foreign operations**

The Group has transferred cumulative translation adjustments of all foreign operations as of the date of transition to IFRS from other components of equity to retained earnings.

#### **C) Deemed cost**

The Group has reported the fair value of a portion of property, plant and equipment as of the date of transition to IFRS as deemed cost associated with IFRS.

#### **D) Recognizing of previously designated financial instruments**

The Group has designated holdings of equity instruments measured at fair value through other comprehensive income based on conditions on the date of transition to IFRS.

#### **E) Leases**

The Group has assessed whether contracts contain leases based on events and conditions existing at the date of transition to IFRS.

Lease liabilities other than assets that were categorized to finance leases prior to the date of transition to IFRS have been measured on the date of transition to IFRS and an equivalent amount has been recorded as right-of-use assets. Decisions whether to exempt recognition of underlying assets with low value or short-term leases were made based on conditions on the date of transition to IFRS.

### **(2) IFRS 1 mandatory exceptions**

IFRS 1 prohibits retroactive application of IFRS to “estimates,” “derecognition of financial assets and liabilities,” “hedge accounting,” “non-controlling interests” and “classification and measurement of financial assets.” The Group intends to apply IFRS to such items occurring after the date of transition to IFRS.

### (3) Adjustment from Japanese GAAP to IFRS

The changes in the Group's financial position and operating results caused by the transition from Japanese GAAP to IFRS are as follows. The "Reclassification" table presents items that do not affect retained earnings and comprehensive income, and the "Difference in recognition and measurement" table presents items that affect retained earnings or comprehensive income.

#### A) Adjustments of equity as of the date of transition to IFRS (April 1, 2018)

(Millions of yen)

JGAAP line item	JGAAP	Reclassification	Difference in recognition and measurement	IFRS	IFRS line item	Notes
Assets					Assets	
Current assets					Current assets

## H) Notes to adjustments

### (i) Reclassification

- a Items such as sales discount and purchase discount presented under Japanese GAAP as non-operating income and non-operating expenses are deducted under IFRS from revenue and cost of sales, respectively.
- b Items (excluding sales discount and purchase discount) presented under Japanese GAAP as non-operating income, non-operating expenses, extraordinary income, and extraordinary loss are stated under IFRS as finance income and finance expense for financial-related items and as other income, other expense, or share of profit of associates accounted for using the equity method for other items.
- c Time deposits with deposit periods longer than three months presented under Japanese GAAP as cash and deposit are stated under IFRS as other financial assets under current assets.
- d Long-term deposits presented under Japanese GAAP as other under noncurrent liabilities are stated under IFRS as other financial liabilities under current liabilities.
- e Other accounts receivable presented under Japanese GAAP as other under current assets are stated under IFRS as included in trade and other receivables. Also, accounts payable—other and accrued expenses presented under Japanese GAAP are stated under IFRS as trade and other payables.
- f Land use rights presented under Japanese GAAP as included in intangible assets are stated under IFRS as included in right-of-use assets.

### (ii) Differences in recognition and measurement

The Group made the following adjustments, related accounting for tax effects and allocations to non-controlling interests.

- g Inventory valuation and unrealized gains and losses on consolidated internal transactions  
The calculation method of unrealized gains and losses on inventories has been changed with the revaluation of inventories based on manufacturing costs under IFRS.
- h Valuation of property, plant and equipment  
The cost model was used for valuation of property, plant and equipment on the date of transition to IFRS. As a result, the land revaluation under Japanese GAAP was reversed and valued at acquisition cost. Also, the Group applied the exemption provision for the first-time adoption of IFRS regarding certain land and has valued the landholdings at deemed cost.
- i Application of impairment accounting  
Impairment loss was recorded to some property, plant and equipment as a result of the valuation in accordance with IFRS of recoverable noncurrent assets on the date of transition to IFRS.
- j Lease transactions  
Under Japanese GAAP, lease payments other than those associated with finance lease transactions are recorded as expenses at the time of occurrence. Under IFRS, the present value is measured based on the future lease payments at the beginning date of the lease transaction and accounted as a right-of-use asset and lease liability. For a right-of-use asset, depreciation is applied to the leased item using the straight-line method over the projected lease period, and the lease liability is then adjusted for interest and recognized as a liability.
- k Measurement of financial instruments  
Unlisted shares valued at acquisition cost under Japanese GAAP are valued at fair value through other comprehensive income under IFRS. Also, equity instruments recognized as sales gain or loss or impairment loss in net income under Japanese GAAP are classified as financial assets measured at fair value through other comprehensive income under IFRS and are therefore not recognized as sales gain or loss or impairment loss under profit or loss. When financial instruments have been sold and is no longer recognized or for which the fair value has declined substantially, other comprehensive income is immediately transferred to retained earnings.

l Retirement benefit liabilities

There are differences in discount rates used for actuarial assumptions between Japanese GAAP and IFRS. Under Japanese GAAP, actuarial differences and past service costs are calculated through other comprehensive income at the time of occurrence and accounted as an expense over a fixed number of years within the average remaining service period of employees at the time of occurrence. Under IFRS, actuarial differences are recognized as other comprehensive income at the time of occurrence and immediately transferred to retained earnings; past service costs are recognized as profit or loss at the time of occurrence. Under IFRS, for interest cost, the amount resulting from the net amount of plan assets and defined benefit liabilities multiplied by a discount rate and recognized as profit or loss.

m Accounting of deferred tax assets

Under Japanese GAAP, the judgment of recoverability of deferred tax assets takes into account future temporary differences; under IFRS, the method of judgment of recoverability does not take into account a judgment of future temporary differences. In addition, regarding the accounting of deferred tax assets associated with unrealized gains from internal transactions within the consolidated group, under Japanese GAAP recoverability is judged based on taxable income occurred at selling company and is recorded based on effective tax rate of selling company. Under IFRS, recoverability is judged as taxable income in the future at the purchasing company and recorded using the effective tax rate at purchasing company. This both increases and decreases the amounts of deferred tax assets and liabilities, but it also reduces the amount of assets and liabilities that cancel each other out and ultimately leads to higher amounts accounted for both deferred tax assets and liabilities.

n Accounting of levies

Under Japanese GAAP, tax levies were accounted as liabilities when they were levied; under IFRS tax levies are accounted as liabilities at the time of assessment and decision.

o Unutilized paid leave

Unutilized paid leave that is not recognized under Japanese GAAP is accounted as a liability under IFRS.

p Government grants

Under Japanese GAAP, a grant related to an asset is collectively recognized as revenue when it was determined that it was received; under IFRS, it is treated as deferred revenue and is regularly recognized as revenue over the period in which the corresponding asset is recognized as an expense.

q Restricted stock compensation

Under Japanese GAAP, restricted stock compensation is recognized as an increase in equity at the time the stock is granted; under IFRS increase in equity is recognized corresponding to the provision of services after the stock is granted.

r Exchange differences on translation of foreign operations

The Group has adopted the exemption provision for the first-time adoption of IFRS, and cumulative exchange differences of foreign operations as of the date of transition to IFRS are transferred from other components of equity to retained earnings.

## D) Adjustment of retained earnings

(Millions of yen)

	Date of transition to IFRS (April 1, 2018)	Second quarter of FY2019.3 (As of September 30, 2018)	FY2019.3 (As of March 31, 2019)
g Valuation of inventories and unrealized gains and losses on consolidated internal transactions	936	423	668
h Valuation of property, plant and equipment	(2,217)	(2,217)	—
i Application of impairment accounting	(615)	(578)	(528)
l Retirement benefit liabilities	(3,027)	(3,329)	(3,389)
m Accounting of deferred tax assets (Note)	1,390	1,480	229
n Accounting of levies	(772)	(772)	(872)
o Unutilized paid leave	(3,187)	(3,187)	(3,240)
p Government grants	—	—	(704)
r Exchange differences on translation of foreign operations	(23,862)	(23,862)	(23,862)
Other	79	325	105
Total	(31,276)	(31,718)	(31,594)

Note: "m Accounting of deferred tax assets" includes accounting of tax effect related to other categories.
