

Yamaha UC Products API

Yamaha provides APIs (Application Programming Interfaces) for third-party application control of the YVC-1000, YVC-300, YVC-200 and CS-700. Programmers can use all functions featured on the YVC-1000, YVC-300, YVC-200, and the CS-700 through the API, and manage the unit directly without the use of Yamaha's standard interfaces.

The API and full documentation for each product can be downloaded from the Yamaha website for free.

* IP access is on the CS-700 only.

PRODUCT

Unified Communications Microphone & Speaker System
YVC-1000

Unified Communications Speakerphone
YVC-300

Unified Communications Speakerphone
YVC-200

Video Sound Collaboration System for Huddle Rooms
CS-700

What you can do with the API

Microphone mute synchronization with UC applications

Monitor and issue microphone mute event to/from Yamaha products

Change the microphone pickup mode for open spaces

Disable AGC function and fix microphone pickup direction to eliminate noise

Control microphone and speaker EQ

In a room with strong reverberation, cut the low frequency factor from the sound picked up by the microphone

Increase support efficiency

Get serial number, firmware version and more configuration information

...and more
